Konu bağlantıları:	Relates relates to PAR-5 US_602_User login Test
Rank:	0 i0009b:
Sprint:	

Açıklama**Steps to Reproduce:**

1. Navigate to the ParaBank login page: <http://parabank.parasoft.com>
2. Enter an invalid username, e.g., invalidUser
3. Enter an invalid password, e.g., invalidPass
4. Click the "Log In" button

Expected Result:

The application should display an error message such as:

"The username and password could not be verified."

No session should be initiated, and the user should not be logged in.

Actual Result:

Despite entering invalid login credentials, the system redirects the user to the "Accounts Overview" page and behaves as if the login was successful.

Impact:

- Severe security vulnerability.
- Unauthorized access to user areas without valid credentials.
- Compromises the integrity of the login process.

Environment:

- Browser: Chrome
- OS: Windows 11
- Environment: Staging/Test

Suggested Fix:

- Review authentication logic and session management.
- Ensure that server-side validation correctly rejects invalid credentials.
